

CASE REPORT FORM SPECIFICATION

Study CB207-C301 - Calibra Biologics, Inc.

Version 3.1 30 June 2023

Prepared by Nordvale Clinical KK

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

1 PURPOSE AND CONVENTIONS

This document specifies the electronic case report form for the study and provides completion guidance for site personnel. Each page is identified by a page name and each field by a page-prefixed field code.

Fields marked as required must be completed before a page can be marked complete. Fields left intentionally blank require selection of a coded not-done reason.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

2 INFORMED CONSENT PAGE

The Informed Consent page records the date on which written consent was obtained and the version of the consent document signed. The consent date must precede any study-specific assessment.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

3 ELIGIBILITY PAGE

The Eligibility page records investigator confirmation of each inclusion and exclusion criterion as a discrete yes or no field.

Field ELIG-06 captures the ECOG performance status assessed at the screening visit, entered as a single-select field where the permitted responses are 0 and 1.

Field ELIG-11 captures the calculated creatinine clearance in mL/min together with the serum creatinine value and the collection date used in the calculation.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

4 DISEASE STAGE PAGE

The Disease Stage page captures clinical tumour and nodal stage at screening, hormone receptor status for oestrogen receptor and progesterone receptor, and the central HER2 assay result.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

5 VISIT SCHEDULE MODULE

The Visit Schedule module defines the visit structure. The visit at which the subject receives the first dose of study treatment is recorded as Day 1.

On-treatment visits are scheduled at 21-day intervals. The system permits a visit window tolerance of +/- 5 days before a visit is flagged as out of window on the data review listing.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

6 IP INFUSION PAGE

The IP Infusion page records each administration of study treatment, including the planned dose, the administered dose, the infusion start and stop times, and any interruption.

The Non-IP Infusion page records administration of the chemotherapy backbone using the same field structure. The two pages are distinct and must not be used interchangeably.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

7 PHYSICAL EXAMINATION PAGE

The Physical Examination page records height, weight, and the body system examination outcome at each scheduled visit. Screening values are recorded on the Physical Exam- Screening page.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

8 ECHOCARDIOGRAM PAGE

The Echocardiogram page captures the left ventricular ejection fraction determined at screening, the imaging modality, and the investigator interpretation.

A clinically significant decrease requires completion of the cardiac abnormality detail fields and the corresponding adverse event record.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

9 ELECTROCARDIOGRAM PAGE

The Electrocardiogram page captures the twelve-lead electrocardiogram obtained at screening and the twelve-lead electrocardiogram obtained at the end-of-treatment visit, including heart rate and the corrected QT interval.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

10 PATHOLOGICAL COMPLETE RESPONSE PAGE

The Pathological Complete Response page captures the central pathology determination of residual invasive disease in the breast specimen and in sampled regional lymph nodes at the time of definitive surgery.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

11 CLINICAL RESPONSE PAGE

The Clinical Response page captures the investigator assessment of overall clinical response at each scheduled assessment during the neoadjuvant period.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

12 ADVERSE EVENT PAGE

The Adverse Event page captures one event per record, including the verbatim term, onset date, resolution date, outcome, action taken with study treatment, and investigator causality assessment.

Severity is recorded as the maximum grade attained during the event and is graded according to the Common Terminology Criteria for Adverse Events version 4.0.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

13 PROTOCOL DEVIATION PAGE

The Protocol Deviation page captures the deviation category, the date identified, and the free-text description. Importance is assigned by the sponsor and is not editable at the site.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

Synthetic corpus - generated by cross-doc-qc - not a regulatory document

14 END OF STUDY PAGE

The End of Study (EOS) page records the subject end-of-study status and date. The safety follow-up assessment captured on this page is completed 28 days after the last dose of study treatment.

DERIVED DEMONSTRATION CORPUS
CORPUS DE DEMONSTRATION DERIVE

15 EDIT CHECK SPECIFICATION SUMMARY

Hard edit checks prevent page completion until resolved and are reserved for values that are not clinically possible. Soft edit checks raise a query for site confirmation.

Cross-page edit checks include date sequence validation between consent, screening, randomisation, and first dose.
